

Talk About A Great Image!

Service Bureaus Say Scan-Optics Is the Best

"The SO 300 Series scanners have allowed us to exceed client needs while significantly expanding our image scanning business. We are also able to turn critical deadline-sensitive projects quickly. The SO Series' speed, ability to scale with our production needs, and low price point have already provided **strong ROI increases.**"

~ Craig Parrish, Managing Director, Digital Legal-PA

"Our document conversion center captures an average of 12,000 images per hour and over 150,000 images per day. We're running our scanner about 14 hours a day. Our Scan-Optics scanner is much faster than the equipment we had before. There's just no comparison. With Scan-Optics, one person can do what about five of those machines could do. Any other machine on the market that will do the same job will cost you twice as much. **You just can't beat Scan-Optics' price performance.**"

~ Lyndell Farmer, President, Document Technology, Inc.

"We were able to quickly integrate the Scan-Optics SO Series into our operation with a very minimal learning curve. The SO Series has been a top performer and instrumental in meeting our increasing production demands. **Four thumbs up.**"

~ Michael Thompson, Director,
Conversion Services for Archive Systems

"Scan-Optics' SO Series scanners represent the **'top of the line'** scanners for paper image capture. In addition, Scan-Optics' technology will allow our customers to maximize their productivity without the addition of any labor."

~ Gary Armstrong, President and Joseph
Paradiso, CEO Co-founders of Imaging 411

"The Scan-Optics SO Series **provides the features, capacity and flexibility** that we, and a number of our customers, require."

~ Brad Moritz, Chief Marketing Officer &
Manager, Strategic Alliances at ISSI
